SIMULATION CENTRE – TRANSESOPHAGEAL ECHOCARDIOGRAPHY

The purpose of this simulation station is to train attendees in performing transesophageal echocardiography (TEE). Several mannequins equipped with transesophageal capacities will be available to the participants. After a short didactic lecture, each participant will have 15 min to use the probe and to achieve adequate visualization of the heart under close supervision of TEE experts.

This session is particularly attractive for those who would like to introduce themselves to the TEE practice but also for those already practicing TEE but also for somewhat already practicing TEE and who would like to improve their technical skills.
