

Aarne Feldheiser, MD, Assistant Professor

Specialty: Anaesthesiology and Intensive Care Medicine
Institute: Universitätsklinikum Essen und Universität Duisburg-Essen
Department: Klinik für Anästhesiologie und Intensivmedizin
City: Essen
Country: Germany
Function: Attending
Scientific focus: Haemodynamic physiology, monitoring and management, Perioperative outcome

Key words: Haemodynamic, monitoring, enhanced recovery, outcome, perioperative

What else do I want to say?

Frequently during studying medicine, during my residency and now as attending I had several alternative interests within and outside of medicine, but I always came back to medicine in general and especially to anaesthesiology and intensive care medicine. But these alternative interests helped me to find out what are my key interests and passions within medicine. But on the other side key interests and passions predispose you to lose yourself in medicine due to working too much. Now after over 25 years within medicine I am very sad that there were only very few persons crossing my path caring for others and for me the mentoring program could be a very helpful project to change that for the next generation of medical professionals and therefore I am happy to contribute. From a mentor perspective I can provide support in clinical and experimental research and offer an assessment of feasibility and futility of future projects or analyses by confidentially listening, re-assessing, and questioning the mentee up to offering ideas for projects. But my most precious point to offer is that I can share my sufferings and losses to help the mentee avoid similar mistakes. Your interest in my scientific focus is helpful, but not an absolute precondition.
