

## **George Dimopoulos MD, PhD, FCCM, FECMM**

**Specialty:** Pulmonary Medicine, Intensive Care Medicine  
**Institute:** National and Kapodistrian University of Athens  
**Department:** Critical Care  
**City:** Athens  
**Country:** Greece  
**Function:** Professor  
**Scientific focus:** Infections, Resistance, Fungal infections

**Key words:** Infections, Sepsis, mechanisms of resistance

### **What else do I want to say?**

During my career in critical care I was lucky to meet two senior intensivists as mentors. Their supervision was the most sustained way of attaining certain skills, knowledge, professional attitudes and personal growth. Later, I have learned that being a mentor for trainees and students is very demanding but it pays off for mentees and mentors. From a mentor perspective, I am willing to provide the right way to approach the critically ill patient, to listen and ask questions, to give feedback concerning specific projects, to encourage research and to add to your general professional development.
