

Ib Jammer, MD, PhD, DESA

Specialty: Anaesthesiology, Perioperative Intensive Care
Institute: Haukeland University Hospital and University of Bergen
Department: Dept. of Anaesthesia and Intensive Care and Dept. of Clinical Medicine
City: Bergen
Country: Norway
Function: Consultant
Scientific Focus: Perioperative Medicine, Outcome Research, Hemodynamics
Key words: Perioperative Medicine, Patient safety, Outcome, Circulation

What else do I want to say?

Intensive Care medicine has changed some focus from treating the very ill patients towards prevention of becoming very ill. Perioperative medicine is a new research area that tries to detect, prevent and treat surgical patients in a way to prevent poor outcome after surgery and to eventually avoid intensive care treatment. There is a huge patient group involved, especially due to demographical changes where we expect an increasing number of older patients in need of surgery. I can provide insight and support career development in this research area as well as give introduction into a great European network with researchers that are working in perioperative medicine.

From my own experience I worked in four different health systems with its cultural and communication challenges. I am also a dad of three kids. Therefore, I can show insight into coping of stress at work or combining clinics and family. Also, I will mentor on career development, how to combine clinical work and research and providing constructive feedback on problems that arise
