

Elisa R Zanier, MD

Specialty: Anesthesiology, Intensive Care Medicine
Institute: Institute for Pharmacological Research Mario Negri IRCCS
Department: Neuroscience
City: Milano
Country: Italy
Function: Head of the Laboratory of Acute Brain Injury and
Therapeutic Strategies
Scientific Focus: traumatic brain injury, subarachnoid haemorrhage, stroke,
inflammation as target of therapeutic strategies, the
protective mechanisms of stem cells, brain repair,
experimental models
Key words: traumatic brain injury, brain protection, brain repair

What else do I want to say?

I believe that a close interaction between basic scientists and clinicians is fundamental to identify relevant therapeutic targets and develop successful strategies for brain-injured patients. This is the reason why I moved to the laboratory several years ago.

From a mentor perspective, I am willing to provide my time for listening, interacting with you concerning ideas on specific bench to bedside projects and support you with planning or conducting a research project in the field of neuroscience.
