

## Fabio Silvio Taccone, MD, PhD

**Specialty:** Internal Medicine – Critical Care  
**Institute:** Hôpital Érasme, Université Libre de Bruxelles (ULB)  
**Department:** Intensive Care  
**City:** Brussels  
**Country:** Belgium  
**Function:** Assistant Professor  
**Scientific Focus:** Brain Injury – Microcirculation and tissue perfusion – Antibiotics PKs.

**Key words:** Antibiotics, sepsis, microcirculation, brain, monitoring

### What else do I want to say?

Fabio S. Taccone, MD, PhD, is Assistant Professor at the Department of Intensive Care of Hopital Erasme in Brussels (Belgium). He received his medical degree from the University of Naples, Italy (SUN) in 2000 and moved to Belgium in 2001 to start a post-graduate license in Internal Medicine at the Université Libre de Bruxelles, Belgium (ULB). He finally became intensivist in 2006 and immediately initiated a clinical fellowship with Prof JL Vincent. Since 2009, he initiated a PhD doctorate (“Fondation Erasme” Award) and has presented in October 2014 his thesis on cerebral perfusion during sepsis. Dr Taccone has a large area of interest in critical care medicine, with a particular research in antibiotic pharmacokinetics, brain injury after cardiac arrest, cerebral perfusion and microcirculation during severe infections and therapeutic hypothermia as a neuro-protective strategy. As one of the person involved in animal research in the “Laboratoire de Recherche Experimentale”, which is affiliated to the Dpt of Intensive Care in Brussels, Dr Taccone may help for both clinical and experimental research to potential young physicians, especially with planning or conducting a research project, provide expert advise in critical care and assist for potential international project using a large network of contacts.
