Scientific Focus: Perioperative medicine, Acute respiratory Failure, Mechanical Ventilation, Gas-exchange and respiratory, Meta-analysis, Large observational and randomized controlled trials
Key words: Postoperative pulmonary complications, Acute Respiratory Failure, Mechanical Ventilation, Gas-exchange and respiratory mechanics, meta-analysis, randomized controlled trials

What else do I want to say?

I have had great experience from clinical work to education and training as well as experimental and clinical research. I am also involved in different organizational activities at local and national level. Thus, I personally believe that my experience, in different clinical and scientific fields, might be of help and support in the educational and training process of next generation of intensive care physicians, in different areas of interest of Anesthesiology and Intensive Care Medicine. I can also stimulate and possibly organize contact with other residents and young generations of physicians involved in the treatment of acute care patients within other National and International Societies. The IRCCS San Martino Policlinico Hospital includes all the facilities and support for this training with national and international links and collaborations.
